

Table 3. Prevalence of NG, IFG, IGT and DM in our group after adjusting for the frequency in the total number of subjects with impaired fasting glucose

	Males		Females		Total	
	n	%	n	%	n	%
NG	280	72.92	369	87.65*	649	80.62
IFG	33	8.59	14	3.32**	47	5.84
IGT	15	3.91	8	1.90	23	2.86
DM	56	14.58	30	7.13*	86	10.68

*p<0.001, **p=0.002 compared to males
