

Table 1. Population characteristics and outcomes divided by AVS diagnosis. Mean follow up 16 months

Variable	Outcomes (mean±SD)
43 Patients who lateralized and underwent surgery	
Age (years)	56±12
M:F (%)	61:39
Systolic Blood Pressure (mmHg)*	
Pre-procedure	160±5.3
Post-procedure	127±3.3
Diastolic Blood Pressure (mmHg)*	
Pre-procedure	100±2.0
Post-procedure	80±1.9
Potassium (mmol/L)*	
Pre-procedure	3.00±0.10
Post-procedure	4.4±0.09
24 Patients who did not lateralize and were managed conservatively	
Age (years)	55±12
M:F (%)	58:42
Systolic Blood Pressure (mmHg)*	
Pre-procedure	148±7.3
Post-procedure	135±3.3
Diastolic Blood Pressure (mmHg)*	
Pre-procedure	99±4.3
Post-procedure	86±1.9
Potassium (mmol/L)*	
Pre-procedure	2.68±0.10
Post-procedure	4.3±0.09

*P<0.001 Paired t-test comparison to the pretreatment value
